# CONDIÇÕES HABITACIONAIS:

## Descrição e Interpretação:

A dimensão Condições Habitacionais tem por objetivo sinalizar famílias em situação de vulnerabilidade em diferentes aspectos da moradia, incluindo indicadores de déficit habitacional, de abrigabilidade e de acesso a serviços.

O índice sintético dessa dimensão representa a proporção média de indicadores que sinalizam vulnerabilidades em relação às condições habitacionais.

A dimensão Condições Habitacionais identifica possíveis situações de vulnerabilidade em diferentes aspectos da moradia. São sinalizadas situações de déficit habitacional, de baixa qualidade em termos de abrigabilidade e de baixo acesso a serviços.

O índice sintético representa a proporção de indicadores que apontam para uma possível situação de vulnerabilidade habitacional.

**Atenção!** O IVCAD é calculado considerando famílias com cadastro atualizado em até 2 anos e com renda mensal de até meio salário mínimo por pessoa.
